FOOD CHEST, No. 6.

In this chest, as issued, considerable vacant space is left in order to allow latitude to each medical officer as to the exact character of the supplies he may wish to carry.

The printed plan inside the cover of each gives the general arrangement.

Tins labeled "corn starch," "chocolate," and "arrowroot" are included, although not mentioned in the official list of contents, as it is thought that they may contain articles of more general use.

CONTENTS.

Beef extract or an equivalent preparation.	Tins for the following articles:
Candles.	Beans.
Condensed milk, in original cans, 8 pounds.	Butter.
Soap.	Coffee.
Vinegar, in 1-quart wicker covered bottles, 2 bottles.	Salt and pepper.
Yeast powder, in $\frac{1}{2}$ -pound original cans.	Sugar (2 tins.)
	Tea.

PACK SADDLE.

The new pack saddle, issued for use with the medical and surgical chests, at present consists of—

- One tree, with pads and latigos.
- One breast strap.
- One breeching harness.
- One crupper.
- Two girths.
- Two ropes, leather tipped.
- One surcingle.
- One halter and watering bridle (complete).
- Two saddle blankets.
- Two canvas covers for medical and surgical chests.

Four split links are carried in each medical and surgical chest for attaching them at varying heights to the pack saddle.

OUTFIT OF SCHUEHLE ICE MACHINE AS PER LATEST CONTRACT.

Ice machine, complete, Jacob Schuehle's patent, capacity 3,000 pounds in 24 hours, consists of—

- 1 double ammonia compressor.
- 1 steam engine.
- 1 boiler, 20-horse power, complete, with feed pump.
- 1 ammonia condenser.
- 1 $\frac{3}{8}$ -inch boiler-steel freezing tank, incased in 1-inch pine flooring, with the requisite number of ice cans.
- 1 steam condenser, capacity sufficient to furnish in 24 hours distilled water for 3,000 pounds of ice.
- 1 brine pump.
- 1 patent oil eliminator.
- 1 side feed lubricator.
- 300 fire brick.
- Bedplate, necessary pipes, gauges, valves, connections, etc.

Anhydrous ammonia and lubricating oil sufficient to run the machine for two years.

In most cases additional or improved parts have been purchased for these machines, and this list can be considered as approximate only. The ammonia drum or cylinder is a container of the ammonia furnished by contract, and unless purchased from the ice fund does not form a part of the Schuehle machine, being returned when a fresh drum of ammonia is received. The Wood-Ballie machine, of which four are now in use, has an ammonia drum as part of the original machine. See par. 48 and Circular S. G. O., June 13, 1891.
